

**Positioning and Oral Motor Skills:
Set Children up for Successful Feeding Intervention
Presented by
Becky Miksic, OTR/L, T-NLP, T-TET, CHt**

Course Description and Learning Outcomes
<p>In this course, you experience how 9 areas of stability impact eating and how to adjust these areas to provide successful feeding intervention. Also discover over 15 red flags that a child may be lacking for the stability needed for eating, so you can identify areas to address by simply talking to a parent or getting a quick glance at a child. Five key points of support are highlighted so that you know the most crucial areas to address during each feeding session. A visual case study is provided, so you can see the impact that proper positioning has on postural stability and motor skills.</p> <p>Learning Outcomes</p> <ol style="list-style-type: none">1. State five key points of support needed for oral motor success.2. Identify signs that a child's postural stability is impacting oral motor functioning.
